 alisachenko.com

Business Analyst with 5 years experience (~7 in IT) and a background in Project Management. I own the full requirements lifecycle — from pre-sale/discovery through BRD/SRS documentation, delivery, and UAT — in Agile/Kanban teams. Currently running 5–6 parallel projects across different development phases. I use locally deployed AI models and lightweight automation to speed up requirements verification and documentation.

Domain: Media, SaaS, Advertising, GovTech, Mobile, Blockchain/Crypto, Energy/Utilities, Real Estate, Healthcare, IoT, Logistics.

### Experience

|                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| May 2025 - Present   | <ul style="list-style-type: none"><li>• Run multiple projects from pre-sale through UAT, owning requirements, backlog, and BRD, SRS, FRD.</li><li>• Prototype solutions in Figma and AI-assisted coding tools alongside design and dev teams before formal spec sign-off.</li><li>• Model business workflows, system logic, and application architecture in BPMN/UML.</li><li>• Introduced local AI-powered requirements verification (AnythingLLM, RAG) to catch gaps and inconsistencies before reviews.</li></ul> |
| <b>Adraba/Codify</b> | <b>Project Manager / Business Analyst</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Nov 2019 - Jan 2025  | <ul style="list-style-type: none"><li>• Managed a high-load platform with 1M+ MAU — owned delivery, adapted Agile workflows, and tracked KPIs across releases.</li><li>• Translated high-level business goals from multiple stakeholders and client C-level executives into structured user flows, technical specs, and Jira backlogs.</li><li>• Analyzed requirements and risks to align the product roadmap with strategic priorities and negotiate scope with stakeholders.</li></ul>                             |
| <b>Adraba</b>        | <b>Customer Support Manager</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Feb 2019 - Oct 2019  | <ul style="list-style-type: none"><li>• Resolved technical escalations and analyzed user feedback to prioritize the backlog with the dev team.</li><li>• Built the project's first internal knowledge base — user guides and technical documentation that became the foundation for future BA work.</li></ul>                                                                                                                                                                                                        |

### Skills

- **Analysis:** Discovery, Requirements Gathering, BRD, PRD, SRS, User Stories, Acceptance Criteria.
- **Technical:** REST APIs, SQL, Git/GitHub, BPMN/UML/system architecture modeling, n8n (AI Agents), HTML/CSS.
- **Tools:** Jira, Confluence, Figma, Miro, Lucidchart, Swagger, Notion, ClickUp, AI-assisted coding IDEs (Claude Code, Cursor).
- **Emerging:** AI-assisted development, agentic IDE workflows, local LLM deployment (Ollama, RAG, AnythingLLM).
- **Languages** – English (Upper-Intermediate), Ukrainian (Native).
